Description:

Freda is a well grown girl. She is head collar trained and walks well. She likes to be quite independent, but is not a problem to handle as part of herd husbandry tasks.

She has been mated to Mullacott Snowdon (July 2023), a leopard appaloosa, and has scanned pregnant (15/9/23) Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested every three months and only given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johne's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in quarantine for 4 weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.

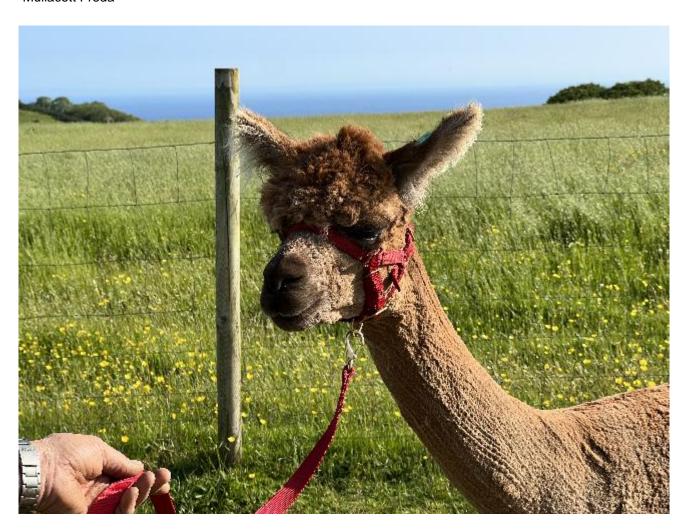

Name of covering male: Mullacott Appaloosa Snowdon (Appaloosa)

Last Mating Date: 3rd July 2023

Estimated Date Cria Due (Pregnant Female): 3rd June 2024

Number of Crias bred from female: 0
