(taken on 14th May 2022 at 1 Year and 1 Month of age)

Description:

Celeste is a fun girl. She likes to come up and give kisses in the field. She is a harlequin alpaca, changing from a spotty fawn to this amazing charcoal grey after first shearing. Her face still displays the speckle of colours often seen on harlequin faces. She could produce appaloosa or harlequin cria. She has been mated (June 2023) to an unrelated appaloosa male, so increasing the chance of a spotty cria. She has scanned pregnant (15/9/23). She is well head collar trained, using Camelid Dynamics methods.

Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested every three months and only given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johne's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in quarantine for 4 weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.

Name of covering male: Mullacott Appaloosa Snowdon (Appaloosa)

Last Mating Date: 24th May 2023

Estimated Date Cria Due (Pregnant Female): 24th April 2024

Number of Crias bred from female: 0
