17.80µ SD 4.30µ CV 24.00% % Over 30 Microns(µ) 1.00% SF 17.80µ Curvature 40.20 deg/mm Yield 0.25 Kg/Year

*(taken on 26th July 2022 at 1 Month of age)*

### **Description:**

Zola is a smaller girl, but growing steadily. She has her appaloosa (or maybe speckled pinto) sire's face markings, and also having a harlequin appaloosa dam, could produce unusual cria. If only there was a genetic test for appaloosa! She is head collar trained and a delight to work with, very sweet!

Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested every three months and only given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johnes's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in

quarantine for 4 weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.

**Number of Crias bred from female: 0**
