Diameter (Micron) of first fleece sample: 19.90 $\mu$

**Fleece:** (2nd)

25.10 $\mu$  SD 4.50 $\mu$  CV 18.00% SF 23.80 $\mu$  Curvature 31.80 deg/mm Staple Length 120 mm Yield 2.40 Kg/Year

*(taken on 6th May 2022 at 3 Years and 1 Month of age)*

**Fibre Testing Authority:** Art of Fibre

### Description:

Barbie (named as she was born when we were having a BBQ!) is an elegant girl. She has lovely black eyeliner and has produced a stunning appaloosa cria. This year she had a lovely white cria. She has not been re-mated, as she birthed too late for our breeding window.

Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested every three months and only given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johne's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in quarantine for 4 weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.

**Number of Crias bred from female:** 1

Mullacott Barbie
