(taken on 20th November 2021 at 1 Year and 5 Months of age)

Description:

Lotus Flower is a light fawn alpaca with a white forehead. But genetically she is black (ee) without the black colour being produced (aa). She had a male cria (Orpheus) in 2023, who looked just like her. She will be available after weaning her cria (Dec 2023). She is head collar trained and we handle her in line with camelidynamics techniques.

She was mated on 6th & 12th June this year but, despite earlier spit offs, was scanned not pregnant in September 2023.

Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested every three months and only given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johne's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in quarantine for 4 weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.

Number of Crias bred from female: 1
